nuuless			City		
Once signed by the fire	department, this is a PERMIT for the	ne storage of fue	el oil and use of the oil	burning equipment.	
Approved by:				Date:	

checklist as a guideline. Current regulations will apply. **UNENCLOSED TANKS** All applications must be on Form 1 П Over 10,000 gallons on site requires License & Permit from local community Single tanks shall not be larger than 660 gallons Certificate of Competency required, no other Maximum aggregate capacity of unenclosed license acceptable, plumbing, electrical, etc. multiple tanks is 1320 gallons Verify emergency shut-off is outside burner room Unenclosed tanks shall be at least five feet from an internal or external flame Verify separate circuit for oil burner Unenclosed tanks shall not obstruct service meters. Verify presence of overhead thermal switch service panels and shutoff valves Verify presence of service switch within 3' of burner Bottom outlet tanks pitched to the opening Verify presence of high limit controller Tanks exposed to vehicles will be protected by Primary control has safety shutoff within 15 secs. barriers Stack type primary may be easily removed Steam boiler equipped with low-water cut-off **ENCLOSED TANKS** Clear access to clean out and services panels No oil leaks present at burner Over 660 gallon tanks enclosed by two hour fire resistive assembly Installation instructions present on site Tank enclosures provided with 6" high tight sills or Combustion test results on Form 1 ramps Three metal screws at each joint in chimney Tank is 4" above floor supported by 12" thick masonry saddles spaced not more than eight feet Thimble present at chimney connection on centers and 15" from top and walls of enclosure IF POWER VENTER IS USED: Check air pressure switch, post purge control and secondary control. All oil must be transferred by pump, and Installation instructions present. connections must be at the top of the tank Draft regulator is present unless exempted Adequate air is present for combustion **ALL TANKS** Adequate clearances per manufacturers listing Thermal valves at burner and tanks Two tanks may be cross-connected as shown in Fig. 8.9.1 NFPA 31 2011 edition П Listed flexible hose may be used. Return lines must enter the top of tanks No Teflon tape on oil line or on oil line fittings Vent pipes must be two feet from building openings No compression fittings are permitted Vent pipes must terminate 3 ft. above grade min. Solder joints made with 500 degree F solder or greater Vent pipes must have weatherproof caps All oil supply and return lines must be protected Fill pipes must be two feet from building openings from injury. All new lines must be continuously Fill pipes must have tamper proof identifying caps sleeved with non metallic tubing. Oil safety valves may be used on existing lines not exposed to IF POWER VENTER IS USED: freezing. Overhead lines require no sleeve and are All outside connections sealed Vent terminal must be three permitted feet above all air inlets within 10ft. Burner air intake is Oil supply lines and return lines to tanks exposed to exempted Vent terminal must be four feet from doors and freezing temperatures must come off the top of windows. Vent must be one foot above finished grade. Three tanks foot clearance from inside corners. Not above or within three Lines for kerosene, and range oil (#1) are exempt feet of an oil tank. Seven feet above a public walkway. П No oil leaks present at tank Listed oil filter is present Tank is UL80 or (DIB+) PV-VI 321 (under 660 gal) **OUTSIDE TANKS** or UL 142 (over 600 gal) Shutoff valve located at bottom of tank All UST's and tanks over 660 gallons must be Size of vent as per manufacturer installed as per NFPA 31 2011 edition Oil tank gauge must be present to determine oil Tank protected from physical damage Tanks exterior coated with organic alkyd resin or Inside tanks have audible fill device (vent alarm) asphalt paint Outlet cross connection at bottom of tanks must be Damaged protective coatings must be recovered 3/8" pipe or tubing. Tank does not block means of egress Non-combustible tank supports, tank secure. Tank mounted on continuous 4" thick slab that extends 8" beyond tank perimeter Tank is supported by rigid non-combustible supports

Note To Installer: Inspections will be conducted using this
